

How To Choose The Right Size Of A Wooden Map For Your Wall?

Your home is the reflection of your soul. You reciprocate all the feelings budding inside you by venting them through the medium of decorating your beautiful abode. The **wood map world UK** is the best choice to decorate the interiors without spending a lot of money. Also, the installation of the wooden map takes a lot less effort than creating a highlight wall using paint and Plaster of Paris. But the decision to select the size of the map for your particular wall is a big one. For that, you are bound to get confused about picking the right size and dimensions of the **wooden world map UK**. It is important that the map looks exquisite and you feel thrilled every time you look at it. So, here are some hints that will help you enjoy your favorite world map.

1 Pick the spot to place your map.

The map must be placed in accordance with the interior design of the room. The color coordination must match the furniture and the wall paint. Also, it is necessary to place it on a wall that doesn't get direct sunlight. Likewise, keep it away from the cooling direction of the air conditioner. These two ways above will protect it for many years, and its vibrant finish will last a long time .

2 Checking the surface of the wall.

Keeping the evenness of the wall surface in mind while ordering a map is crucial. Smooth surfaces allow the whole map design to adhere to it without looking flawed. So, find the best spot in your house by checking the smooth finish of the wall. If the wall is highly grooved, it is required to get some putty work done on that part. After this process, order the 3D continents' wooden map of your choice.

3 Measure the dimensions of the wall.

Placing the order to buy a map to enhance your wall is the next step after finishing accurate measurements. It is advisable to get a smaller-sized map than the actual measurements. Measuring the wall using a tape or a mobile app will ensure that you pick the accurate size for your wall.

4 Ensure proportionality

It is essential to leave 5–10 cm of space at the top of the light-emitting **wood map UK** to add to its appeal. Also, when there is a gap between other decorative items and the map, it will add to the beauty of the wall rather than making it messy.

5 Keep space for additional elements.

The 3D world map package contains a lot of fragments in it, like compass, pegs, boats, planes, and country labels. It is delivered with a lot of double-sided adhesive tape to get it done. An ideal map placement must have a room for all those smaller pieces to accentuate your wall and make a detailed piece of art to be displayed with perfection.

6 Electricity socket

For a light-emitting diode map, an electricity connection must be handy on the same wall.

Conclusion

There are a lot of designs and sizes for **wood map world UK** that are an inspiration for you, whenever you look at them. This captivating creation is waiting to be ordered from the My Wooden Map website.
